V2

- 5. (New) A system according to claim, wherein each of said brushes is separately connected to said casing by at least one noise suppression capacitor.
- (New) A noise suppression system for a motor comprising:
  a casing;

a shaft rotatable relative to said casing having an output for activating a vehicle functional device;

a plurality of brushes supported by said shaft and connected to a power supply external to said casing; and

a plurality of capacitors with at least one of said capacitors separately connecting each of said brushes to said casing for suppressing noise.

7. (New) A system according to claim 6 wherein said casing is grounded.

SUP T

- 8. (New) A system according to claim 7 wherein said casing is grounded via connection to said vehicle function device.
- 9. (New) A system according to claim 7 wherein each of said brushes is connected to said power supply with a supply lead forming a plurality of noise suppression circuits.
- 10. (New) A system according to claim 9 including a plurality of inductors with at least one inductor being associated with each of said supply leads.
- 11. (New) A system according to claim 9 wherein each of said supply leads are formed by ferrite-loaded wires.
